

Lab-8 PHP

1. You have an array of numbers with duplicates. Write a PHP script to remove duplicates, sort the array in ascending order using `sort()`, and print it.

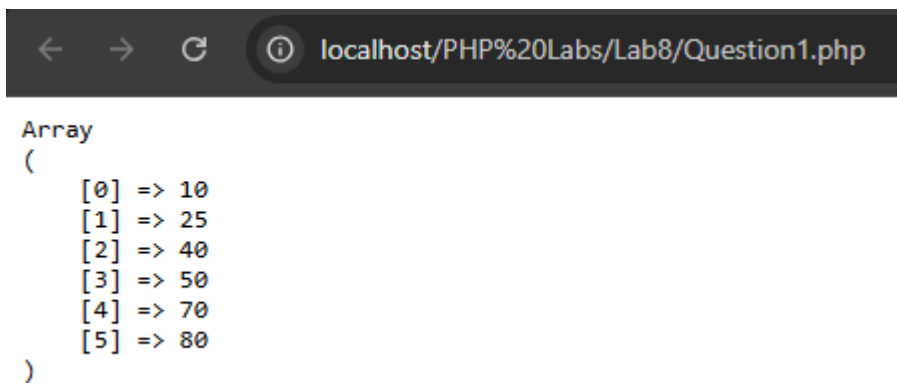

Code:

```
<?php
$numbers = [25, 10, 50, 25, 40, 10, 70, 50, 80];
// remove duplicates
$unique = array_unique($numbers);
// sort in ascending order
sort($unique); // sort() reindexes the array

echo "<pre>";
print_r($unique);
echo "</pre>";

?>
```

Output:

```
Array
(
    [0] => 10
    [1] => 25
    [2] => 40
    [3] => 50
    [4] => 70
    [5] => 80
)
```

2. Given an array of player names. Write a PHP script to divide them into teams of 3 players each using `array_chunk()`.

Code:

```
<?php
$players = ["John", "Mike", "Sara", "Tom", "Anna", "David", "Emily", "Paul"];

// chunk into teams of 3
$teams = array_chunk($players, 3);

// print teams
echo "<pre>";
print_r($teams);
echo "</pre>";

?>
```

Output:

```
localhost/PHP%20Labs/Lab8/Question2.php

Array
(
    [0] => Array
        (
            [0] => John
            [1] => Mike
            [2] => Sara
        )

    [1] => Array
        (
            [0] => Tom
            [1] => Anna
            [2] => David
        )

    [2] => Array
        (
            [0] => Emily
            [1] => Paul
        )

)
```

3. You have an array of student names:Write a PHP script to search for "Charlie" in the array using array_search() and print its position.

Code:

```
<?php
$students = ["Alice", "Bob", "Charlie", "David", "Eve"];
$searchName = "Charlie";

$pos = array_search($searchName, $students);

if ($pos !== false) {
    echo $searchName . " found at position " . $pos;
} else {
    echo $searchName . " not found in the array.";
}
?>
```

Output:

```
localhost/PHP%20Labs/Lab8/Question3.php

Charlie found at position 2
```

4. Given three sets of student roll numbers: Write a PHP script to find the roll numbers that are common in all three batches using array_intersect().

Code:

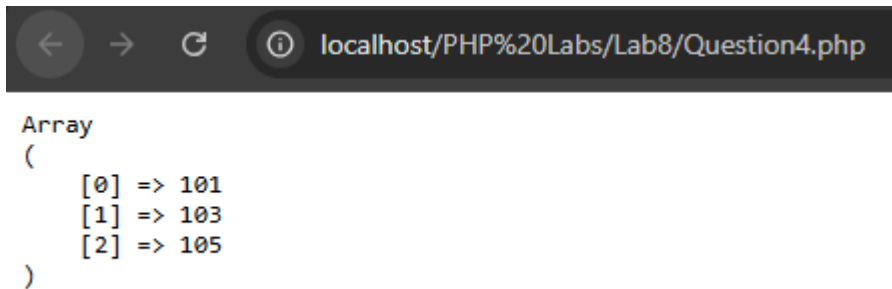

```
<?php
$batch1 = [101, 102, 103, 104, 105];
$batch2 = [103, 105, 107, 109, 101];
$batch3 = [101, 105, 111, 113, 103];

// intersection of three arrays
$common = array_intersect($batch1, $batch2, $batch3);

$common = array_values($common);

echo "<pre>";
print_r($common);
echo "</pre>";
?>
```

Output:

```
Array
(
    [0] => 101
    [1] => 103
    [2] => 105
)
```
